

Cobb Professional Fire Fighters Local 2563
PO BOX 2054
Marietta, GA 30061

Fellow Brothers and Sisters,

Local 2563 is proud to announce a partnership with Jenna Campagna, RN, Medical Outreach Director, from www.mesotheliomaguide.com. We have included the link on our website so that you can further research this disease.

As we all know, cancer has become a hot topic and challenge within the fire service. Most of us can remember a time when there was not a direct link between this occupation and cancer. We now have no way to look past this occupational hazard with all the glaring statistics, research, and unfortunately, mortality rates.

Here are some quick facts that Ms. Campagna shared with me about mesothelioma:

- It is a rare cancer of the protective lining around important organs.
- It affects 2,000 - 3,000 patients a year.
- It is almost always 100% fatal.
- Very few patients choose to treat it (due to the small survival rate compared to other cancers).

What www.mesotheliomaguide.com can offer you:

- They specialize in connecting patients with doctors and treatment options.
- They guide patients through the complex medical system and provide them with free resources on treatment options, specialists, support groups, and if called for, compensation.
- Their website features up to date medical information, including recruiting for clinical trials in case you are interested in experimental treatments.
- They do not charge for their services.

When you have a few moments, please feel free to browse their site at www.mesotheliomaguide.com.

Many thanks,
Dave Dwyer
